Credit Quality ("Quality")

An individual bond or bond mutual fund's credit quality is determined by private independent rating agencies such as Standard & Poor's, Moody's and Fitch. Their credit quality designations range from high ('AAA' to 'AA') to medium ('A' to 'BBB') to low ('BB', 'B', 'CCC', 'CC' to 'C'). Investors interested in the safety of their bond investments should stick to investment grade bonds ('AAA', 'AA', 'A', and 'BBB'), while other investors willing and able to accept a higher level of risk could consider lower credit-quality bonds. Derivatives

GIM Model Portfolios do not make direct use of derivatives. However, ETFs held within the managed portfolios may gain exposure to securities directly and/or through the use of derivatives.

Interest Rate Sensitivity

A measure of how much the price of a fixed-income asset will fluctuate as a result of changes in the interest rate environment.
